- Have handled end-to-end technology product life cycle starting defining targets users, user scenarios/requirements, architecture, development, release, deployment and iterating feedbacks.
- Mostly worked on Agile model with Test Driven development approach and SPRINT based release milestones.

EXPERIENCE

Devathon, Hyderabad — *Senior Software Development Engineer*

NOVEMBER 2016 - PRESENT

Devathon is a design and development agency focused on the early stage entrepreneur or startup. We work directly with teams to help design, build, and scale their products or digital services.

I am working here as Senior Software Development Engineer. My key responsibilities are:

- Leading Development of Reactjs, React-Native, Android(Java) and iOS applications
- Developing React js & Native apps with Redux for state-management, flow to maintain code structure, code push for OTA and Isolation component testing using StoryBook.
- Following Agile Test driven development approach.

BomoTix, Hyderabad — *Senior Software Developer*

MARCH 2016 - OCTOBER 2016

Sports analytics based product startup which uses machine learning and computer vision to giving the results of player performance in form of graphs and videos.

My key responsibilities as senior developer are:

- Lead, Develop and Architect the Android Application[ie: MVP with dependency injections(dagger, butterknife) for better design].
- Handled motion sensor continuous communications
- Handled live video streaming using FFMPEG
- Video Editing based on motion sensor data
- Analytics generation on hand movement using motion sensor

[VioletStreet](#), Hyderabad — *Android Developer*

MARCH 2015 - NOVEMBER 2015

Created magento Restful-APIs and developed the violetstreet fashion App which provides unique experience of shopping from designer boutiques across India. Application contains all basic functionality of an e-commerce app like:

- Cart functionality(customers can add products to their bag)
- Implemented the payment gateway inside the app
- Utilizes google ecommerce analytics for track and trend management.
- General features like: profile management, push-notifications, filters etc

Servesy, Hyderabad — *Software Developer*

JUNE 2014 - MARCH 2015

Servesy was a startup which provides the easiest way to book 15+ Housekeeping Services across Hyderabad.

My key responsibilities as a software developer was:

- Design & Development of the android application.
- Worked with back-end team to create APIs in Java Spring MVC framework

PROJECTS

Devathon - Autochat(Android & iOS SDKs): using that, customers can deploy their chatbots inside their own mobile apps in a matter of minutes. This saves them a lot of upfront development effort and ongoing maintenance effort.

Devathon - Autochat(Inbox): Inbox lets you manage all of your communication channels — email, social media, chat as well as bots in one place, and helps your team collaborate around every message.

BoMoTix: BoMoTix(Body Motion Analytics) is a R&D startup which is utilizing machine learning and computer vision technologies to identify human body parameters for various applications.

VioletStreet: VioletStreet is India's largest designer boutique marketplace, where one can shop from 100+ boutiques from India from anywhere across globe. More than 70% products are exclusive & unique to VioletStreet.

Servesy: It's an online platform that enables individuals to hire 15+ home services assistance professionals. Services on offer include deep cleaning, pest control, laundry, dry cleaning, home appliance repair, and handyman services.

AWARDS

RockStar Developer at VioletStreet to develop deliver android and restful magento APIs together.
